Release Notes

Please read these release notes before reviewing this course:

- As this is an overview course with a duration of 15-20 minutes, we have kept the explanations concise.
- The solution for **Back-to-Back Contract Management on slides 27** in the storyboard) is **still in development**, and we may need to revisit this once it is finalised.
- Certain elements, like the topics table on the left, have been manually created to mirror the Rise layout. While some differences may occur, these adjustments were made to enhance clarity and accessibility. The blue highlights on the left may appear differently for some users, likely due to a PowerPoint issue. Please note that these highlights are for easy reference of the topics in the storyboard.

Customer Execution Overview

START

GrainCorp

Welcome to the **Customer Execution Overview** course.

This course is designed to provide you with an understanding of how the implementation of SAP S/4HANA is transforming the Customer Execution process at GrainCorp Nutrition and Energy (GNE). You will also gain insights into the sub-processes and the main Fiori apps associated with them.

Course Objectives

By the end of this course, you will be able to:

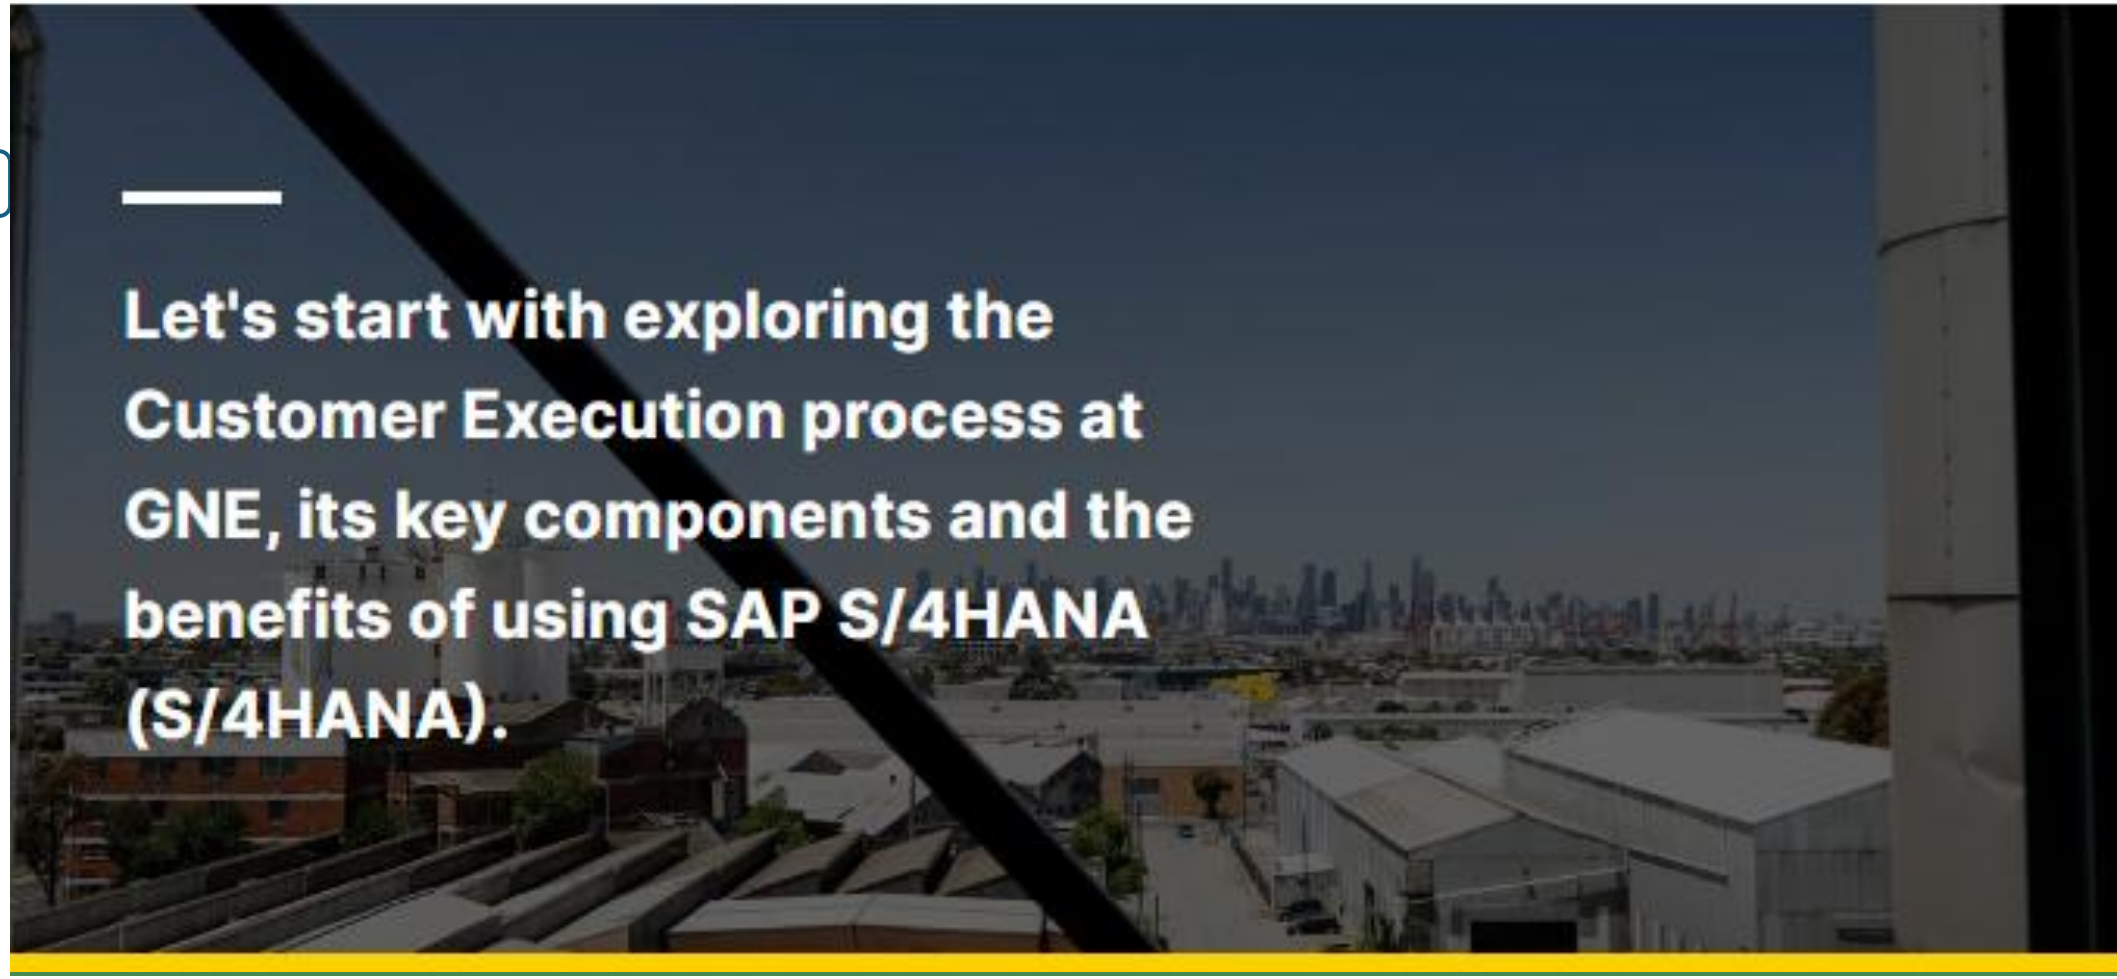

- Explain the Customer Execution process at GNE.
- Identify the different types of contracts and sales used at GNE.
- Describe the Customer Execution sub-processes.

Customer Execution Overview: Glossary

To support your learning, here's a glossary of key terms used in this course.

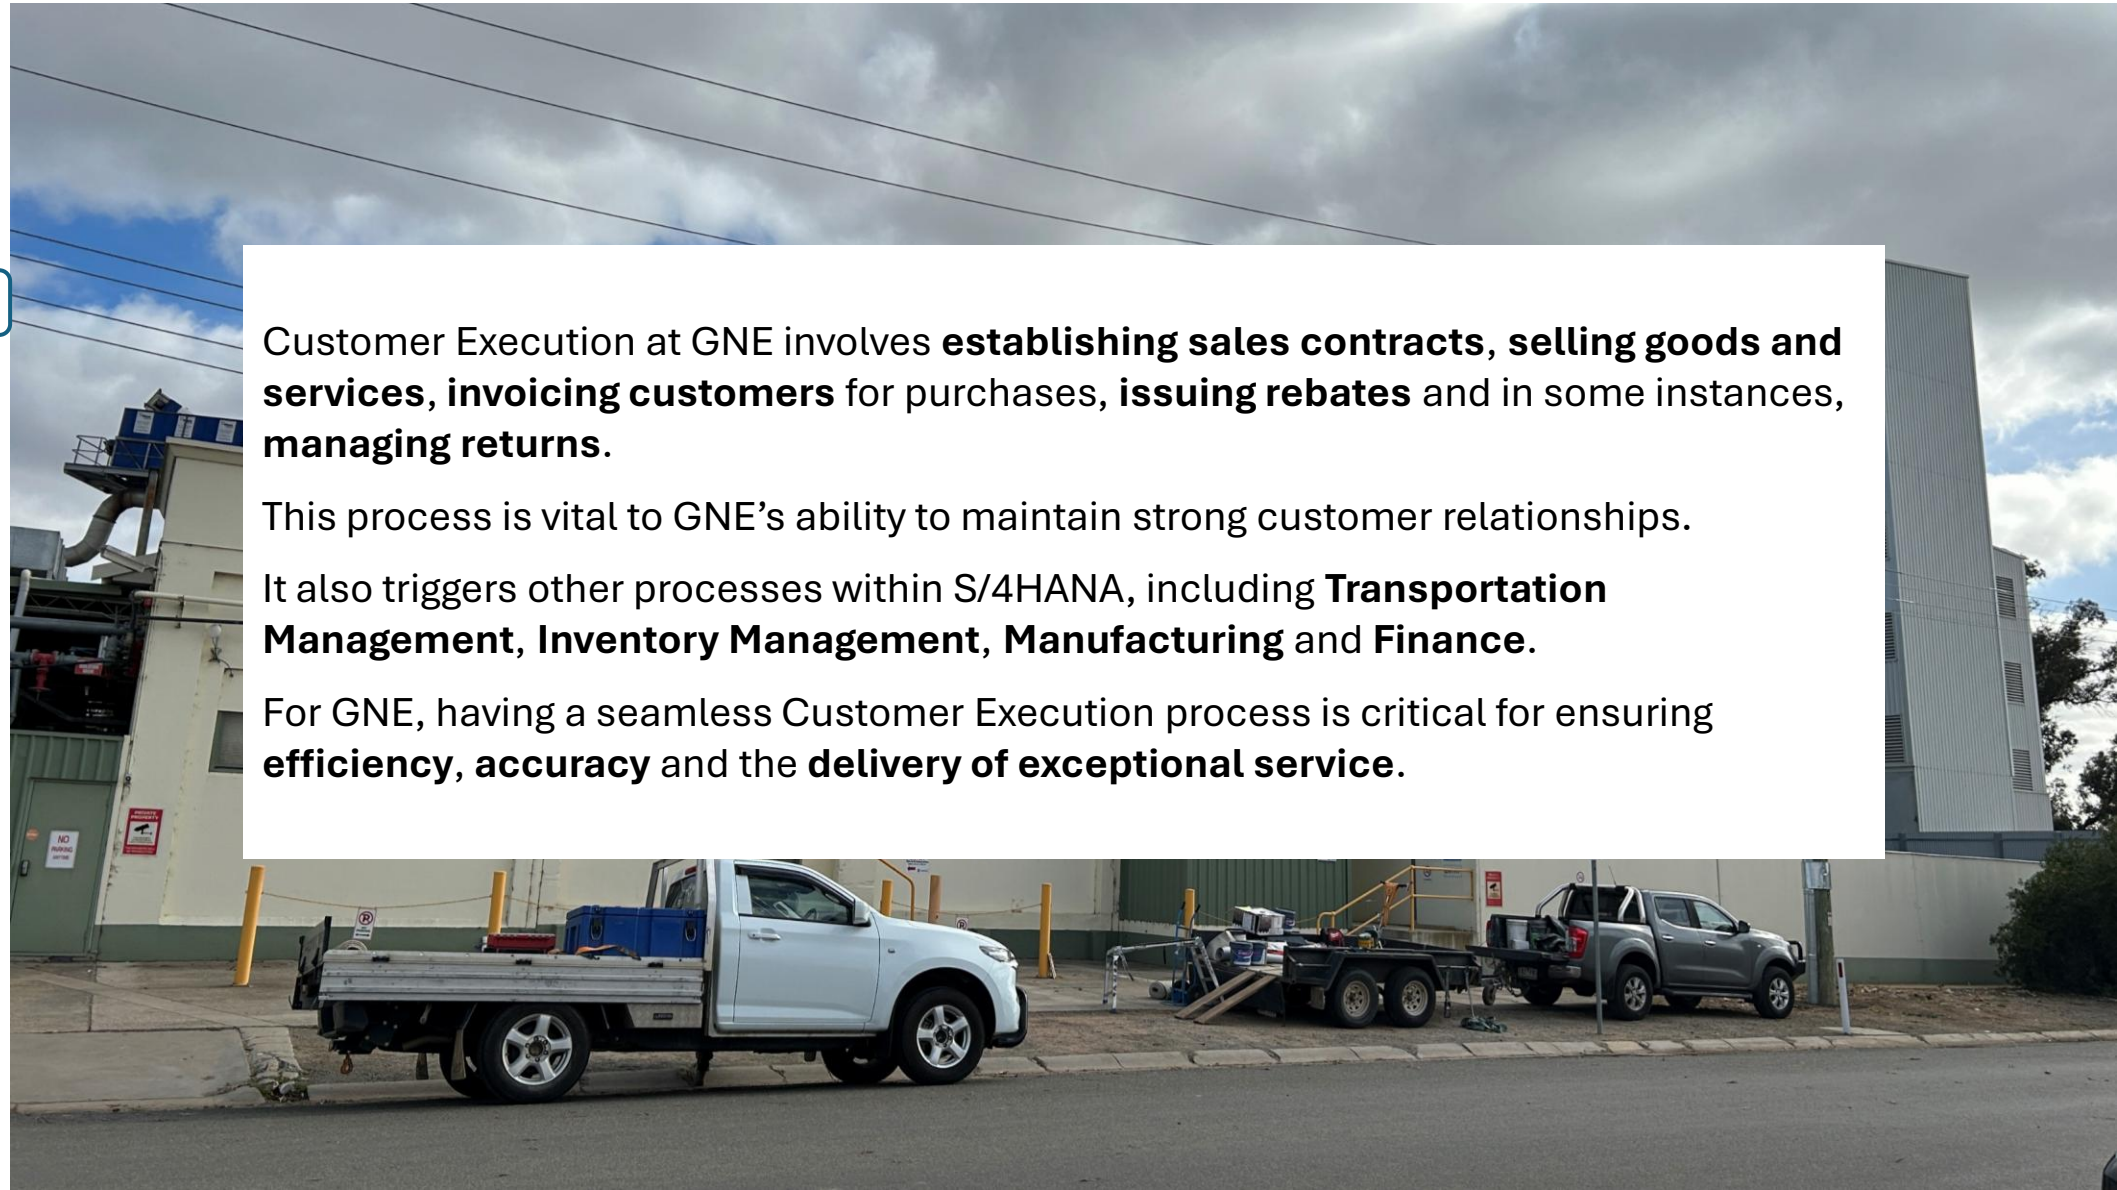

Term	Description
Order to Cash	A customer sales process, encompassing the end-to-end process from Customer Sales Order to Invoicing and Cash Collection, including Master Data, Customer Execution, Transport Management, Inventory Management, Quality Management and Enterprise Services
SAP S/4HANA (S/4HANA)	The current version of SAP enterprise resource planning (ERP) software for large enterprises
Fiori Apps/Tiles	Pre-configured apps within the Fiori Launchpad that help you perform specific business functions (aligned with your role and designed to improve productivity)
Master Data	Master Data is the core business information we use across processes — such as business partners, materials and locations. It provides the consistent data that transactions, reporting and decisions rely on, so it must be accurate and well-maintained.
Business Partner	A central master data object for managing entities with whom GrainCorp has a business relationship. It can be a person, organisation or group and is able to manage customer, supplier and other business-related data including contacts, delivery locations/ship-to parties, etc.
Sales Order (SO)	An SAP document that represents a contractual agreement between a sales organisation and a sold-to party about delivering products or providing a service for defined prices, quantities and delivery times

Customer Execution at GNE

Template Type: Image centered

Introduction to Customer Execution

Customer Execution at GNE involves **establishing sales contracts**, **selling goods and services**, **invoicing customers** for purchases, **issuing rebates** and in some instances, **managing returns**.

This process is vital to GNE's ability to maintain strong customer relationships.

It also triggers other processes within S/4HANA, including **Transportation Management**, **Inventory Management**, **Manufacturing** and **Finance**.

For GNE, having a seamless Customer Execution process is critical for ensuring **efficiency**, **accuracy** and the **delivery of exceptional service**.

Key Benefits

Leveraging S/4HANA for Customer Execution optimises the overall Order to Cash process. While its benefits are generally applicable across the business, **their impact may vary depending on the specific needs of different business groups**.

Click each card to learn more about the benefits that the system brings into the Customer Execution process.

Customer Execution Workflow

Let’s now look at the end-to-end Customer Execution workflow and identify the key touchpoints where S/4HANA plays a role.

Tasks performed by:

S/4HANA - Automated

Note: **Create Outbound Delivery** and **Goods Issue Posting** are steps within the end-to-end Customer Execution workflow; however, they fall under **Inventory Management**.

Template Type: Image centered

Introduction to Customer Execution

At GNE, Customer Execution is structured into the following processes. Let’s explore each of them along with the associated Fiori apps in the upcoming topics.

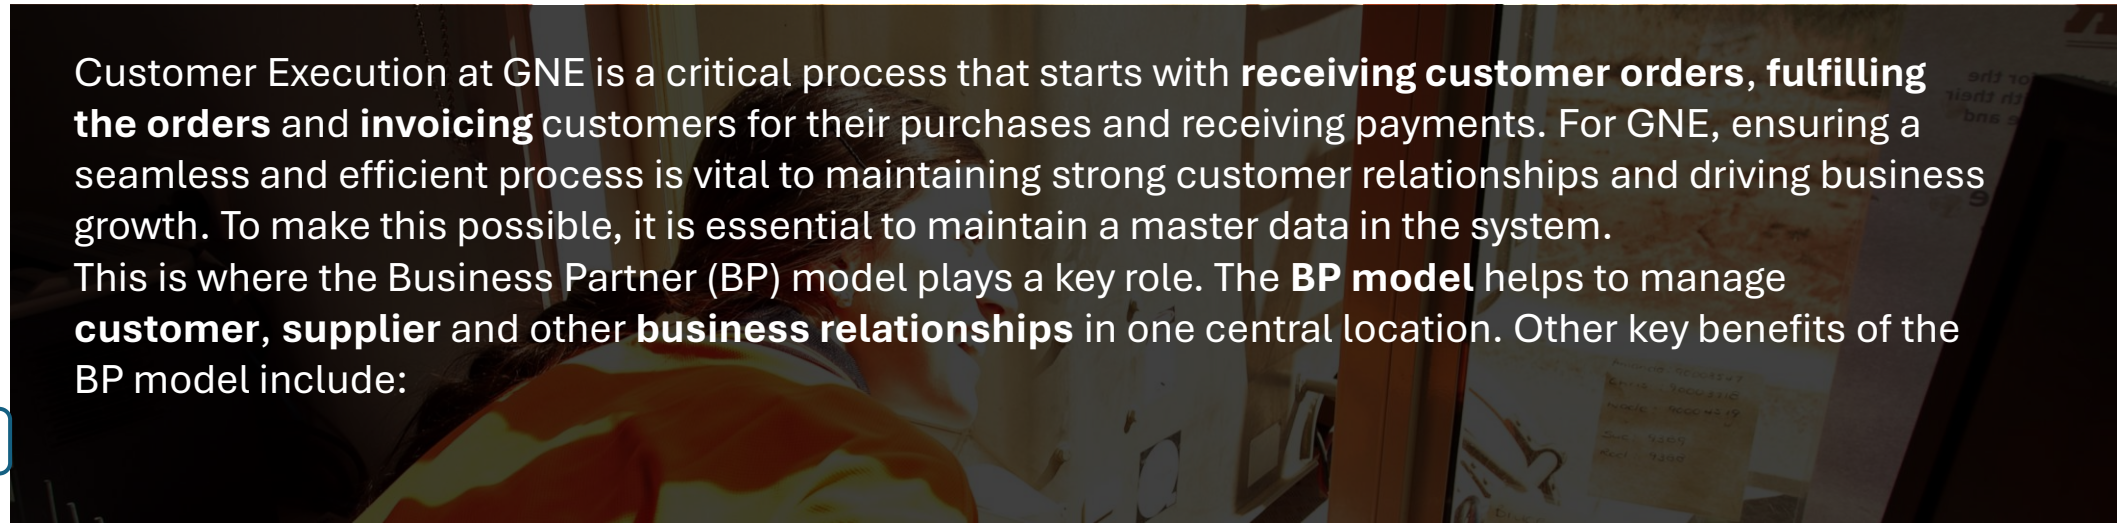

Sales Master Data

Let's start with the Sales Master Data process.

Template Type: Statement C

Sales Master Data

Customer Execution at GNE is a critical process that starts with **receiving customer orders**, **fulfilling the orders** and **invoicing** customers for their purchases and receiving payments. For GNE, ensuring a seamless and efficient process is vital to maintaining strong customer relationships and driving business growth. To make this possible, it is essential to maintain a master data in the system.
This is where the Business Partner (BP) model plays a key role. The **BP model** helps to manage **customer**, **supplier** and other **business relationships** in one central location. Other key benefits of the BP model include:

Sales Master Data

Template Type: Process

The upcoming sub-processes support the Sales Master Data function at GNE.

Click the START button to continue.

START

Sub-process 1

Customer Material Info Record

The **CMIR** is an additional customer master data structure that stores **customer-specific information about a material**.

If populated, **it takes priority over the material master data** during sales order processing.

CMIR data includes the **default delivering plant**, **customer material identifier**, **material description** and **delivery parameters**.

Delivery parameters specify customer-specific requirements, such as minimum delivery quantity and tolerance levels.

Click the arrows on the sides of the screen (<>) to learn more.

Sub-process 2

Pricing Record

Pricing Records store data like list **prices**, **discounts** and **surcharges (freight and taxes) as condition records**.

During document processing, the system retrieves this data to **calculate individual pricing elements and the final total** for the sales document.

These records are created based on parameters like sales organisation, distribution channel and customer material, and can include scales, limits and validity periods.

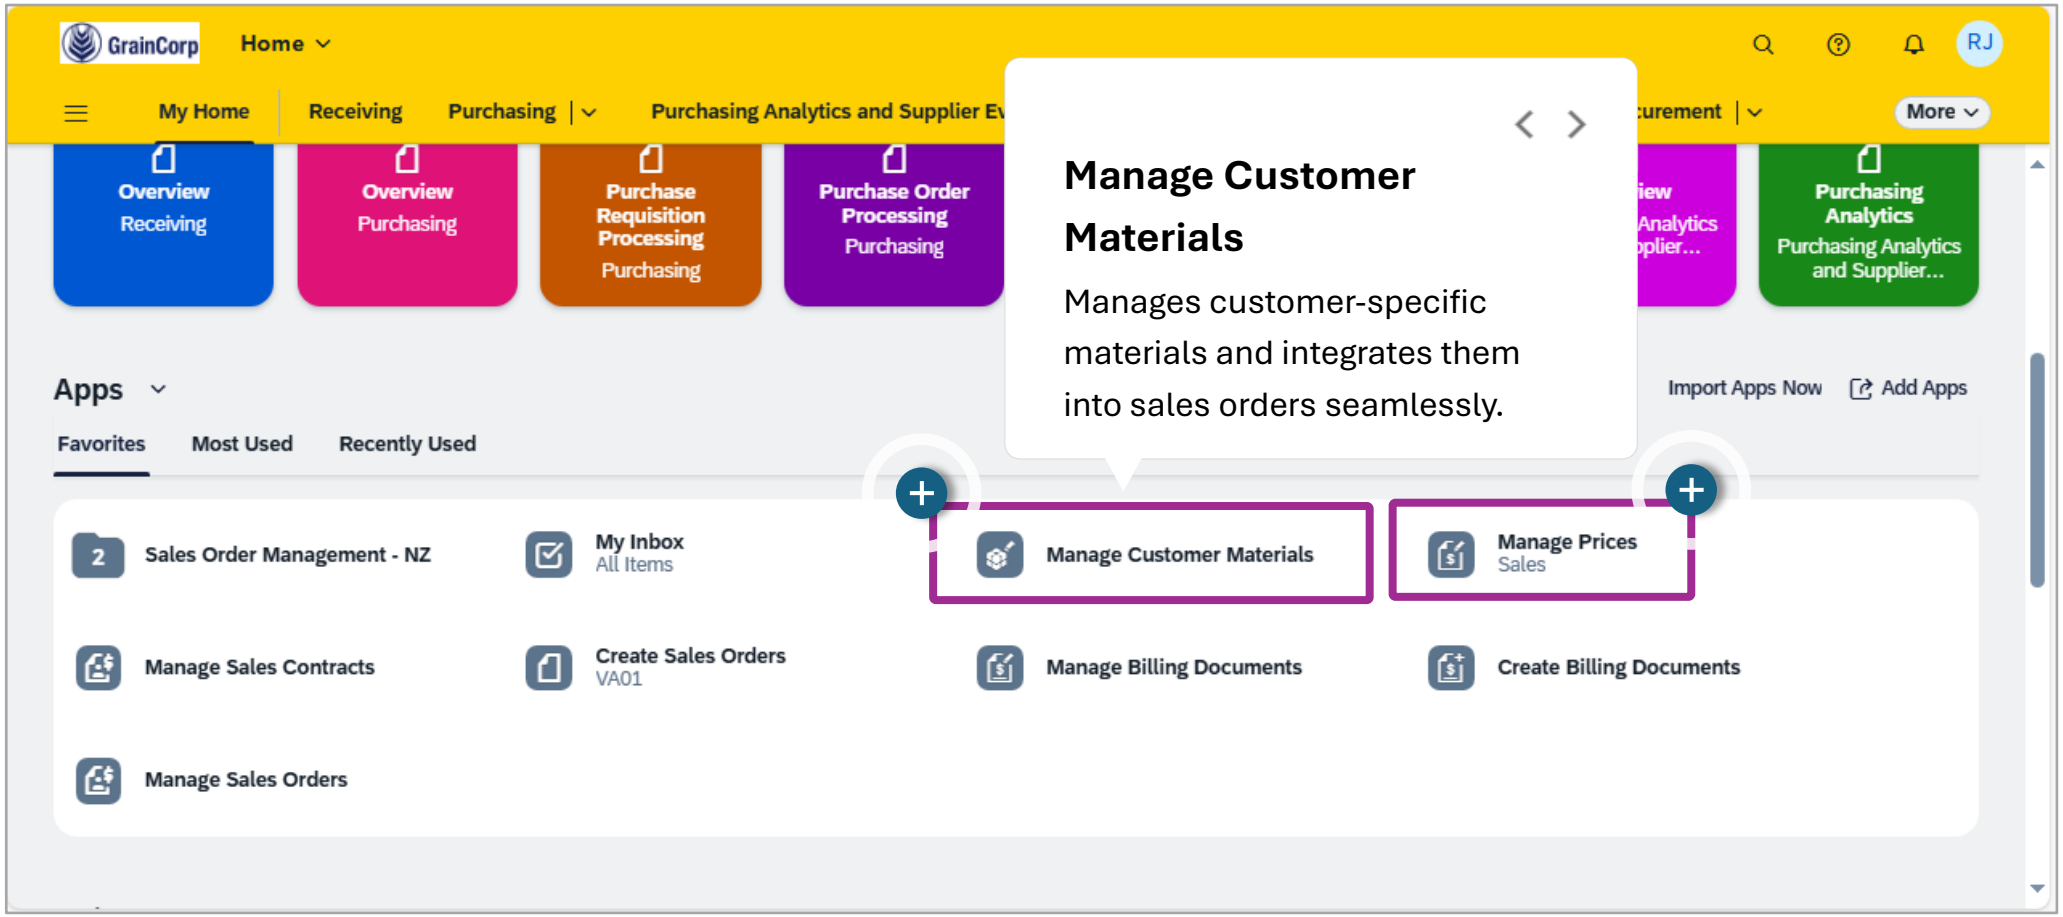

The system also supports **daily spot pricing for Feeds**, updating prices based on real-time market conditions.

Click the arrows on the sides of the screen (<>) to learn more.

Key Fiori Apps

Fiori apps optimise the **Sales Master Data** process by managing customer-specific data, including pricing and materials. Key apps include

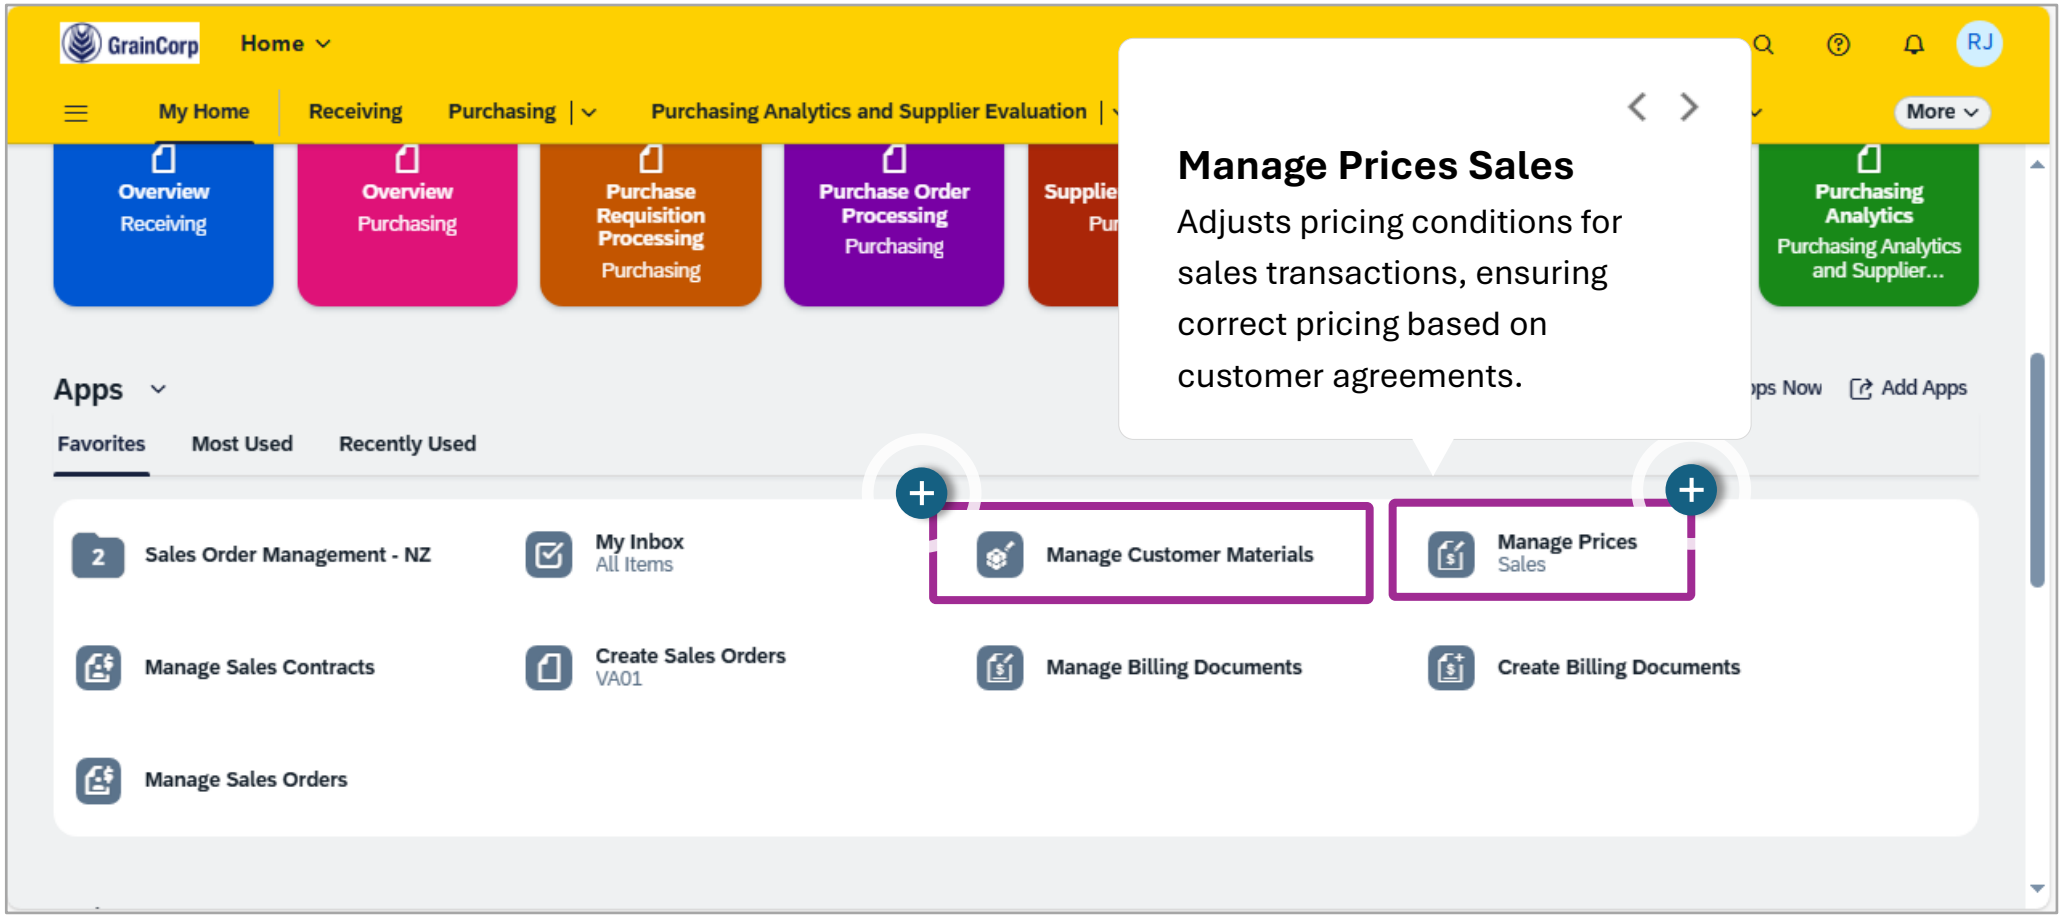

Click the + icon to learn more.

Key Fiori Apps

Fiori apps optimise the **Sales Master Data** process by managing customer-specific data, including pricing and materials. Key apps include:

Click the + icon to learn more.

Sales Contract Management

It’s now time to look at the Sales Contract Management process.

Sales Contract Management

Sales contracts represent **long-term agreements** with customers for goods or services. They define when and under what **conditions specific goods** are sold or services provided. Sales contracts are **valid for a defined period**.

Click each tab to learn about the types of sales contracts used at GNE.

Finished Goods Quantity Contract | Bakery Contract | Sales Deal Commodity Contract

A Finished Goods Quantity Contract is an agreement that allows a **customer to order a specified quantity of a product within a defined period**.

It includes basic quantity and price details, but no set delivery schedule.

The customer fulfils the contract by placing sales orders, known as release orders (or call-offs), which are linked to the contract.

The system automatically updates the released quantities.

Sales Contract Management

Sales contracts represent **long-term agreements** with customers for goods or services. They define when and under what **conditions specific goods** are sold or services provided. Sales contracts are **valid for a defined period**.

Click each tab to learn about the types of sales contracts used at GNE.

Finished Goods Quantity Contract | Bakery Contract | Sales Deal Commodity Contract

Bakery Contract is used for **Human Nutrition** products and is a **customised version of Quantity Contracts**.

These contracts set an **agreed price for delivering products from GNE to the distributor and then to the end user** (e.g., Hot Bread Shop), including commission and the end-user price.

Sales Contract Management

Sales contracts represent **long-term agreements** with customers for goods or services. They define when and under what **conditions specific goods** are sold or services provided. Sales contracts are **valid for a defined period**.

Click each tab to learn about the types of sales contracts used at GNE.

Finished Goods Quantity Contract | Bakery Contract | Sales Deal Commodity Contract

In the GNE business area, sales deals are used for Commodity Contract Management.

Under this arrangement, the **customer agrees to forward-purchase raw materials at a set price**.

GNE, in turn, agrees to sell the finished product at a specified price based on the estimated forward buys, with the same product sold to different customers at different prices.

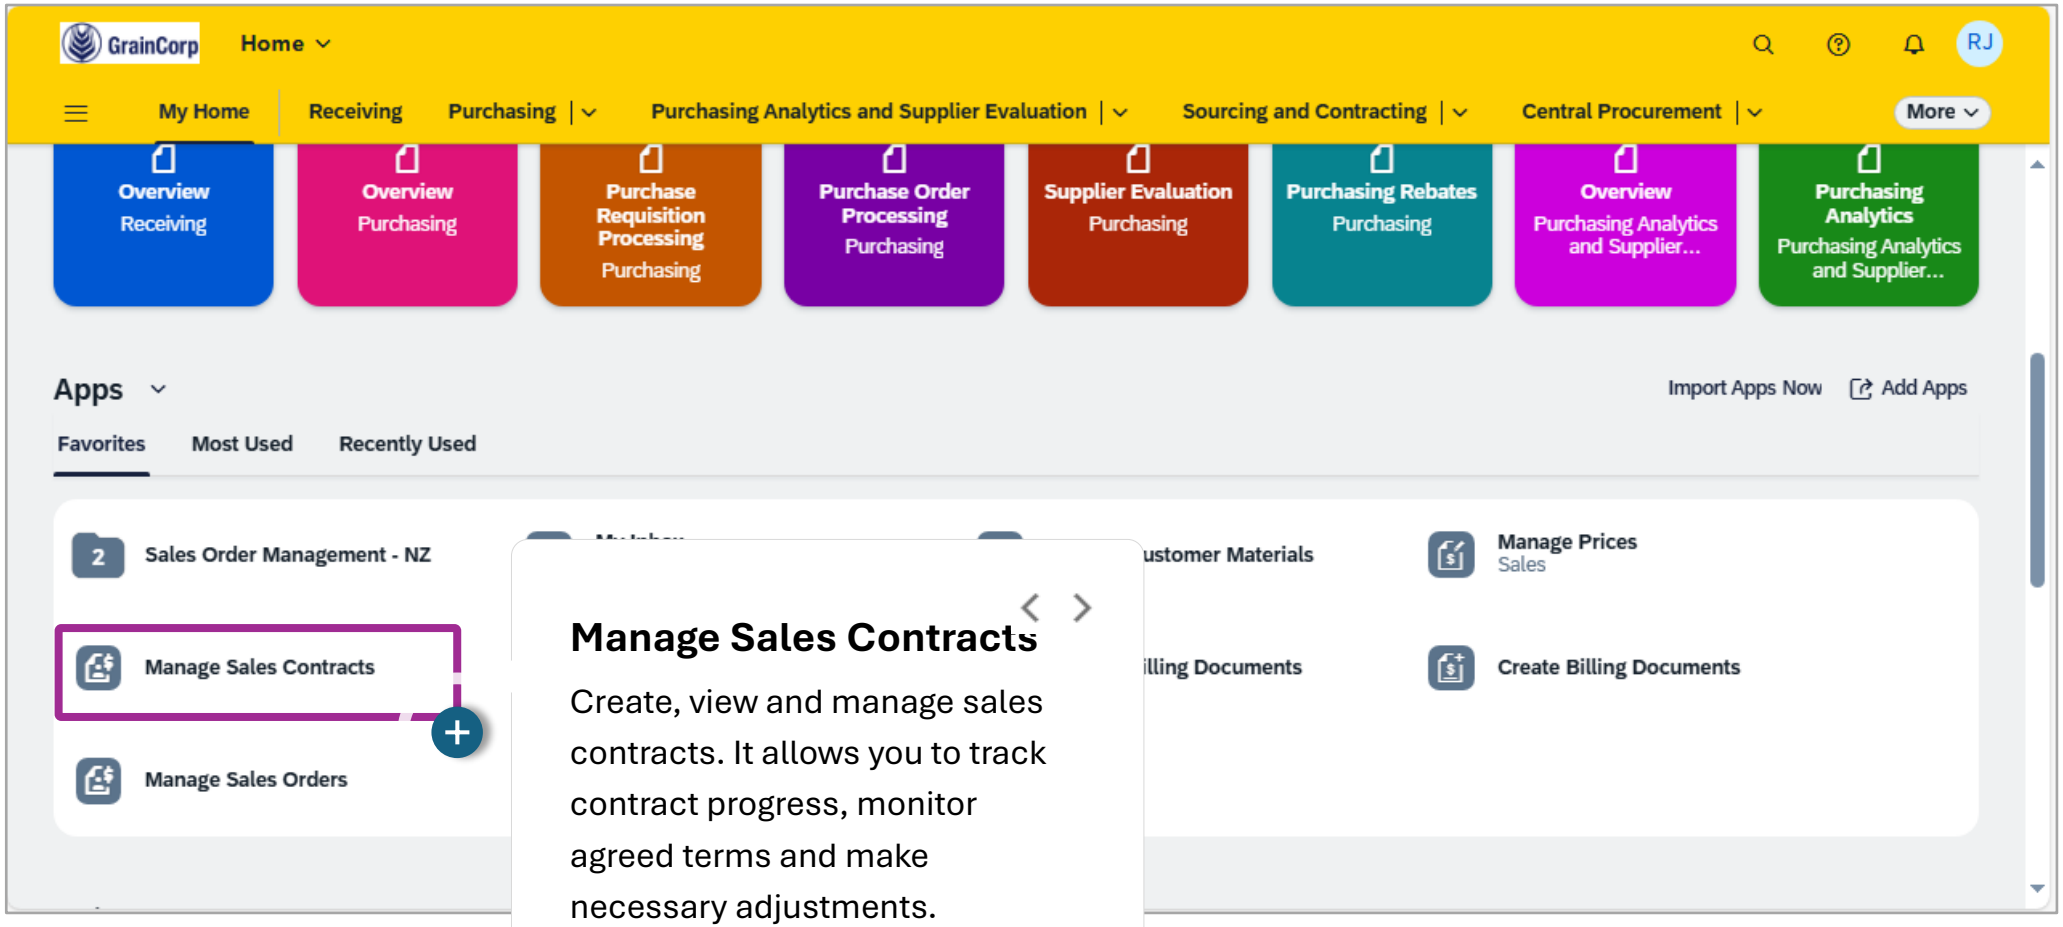

The system tracks raw material consumption against the commitment to ensure accurate profitability.

Click the + icon to learn more.

Customer Sales Rebate

Let's now explore the Customer Sales Rebate process.

Customer Sales Rebate

GNE uses Sales Rebate Processing **to offer rebate incentives to customers** and manage rebate payments on schedule.
Sales Rebate Processing supports this function. Let's understand how.

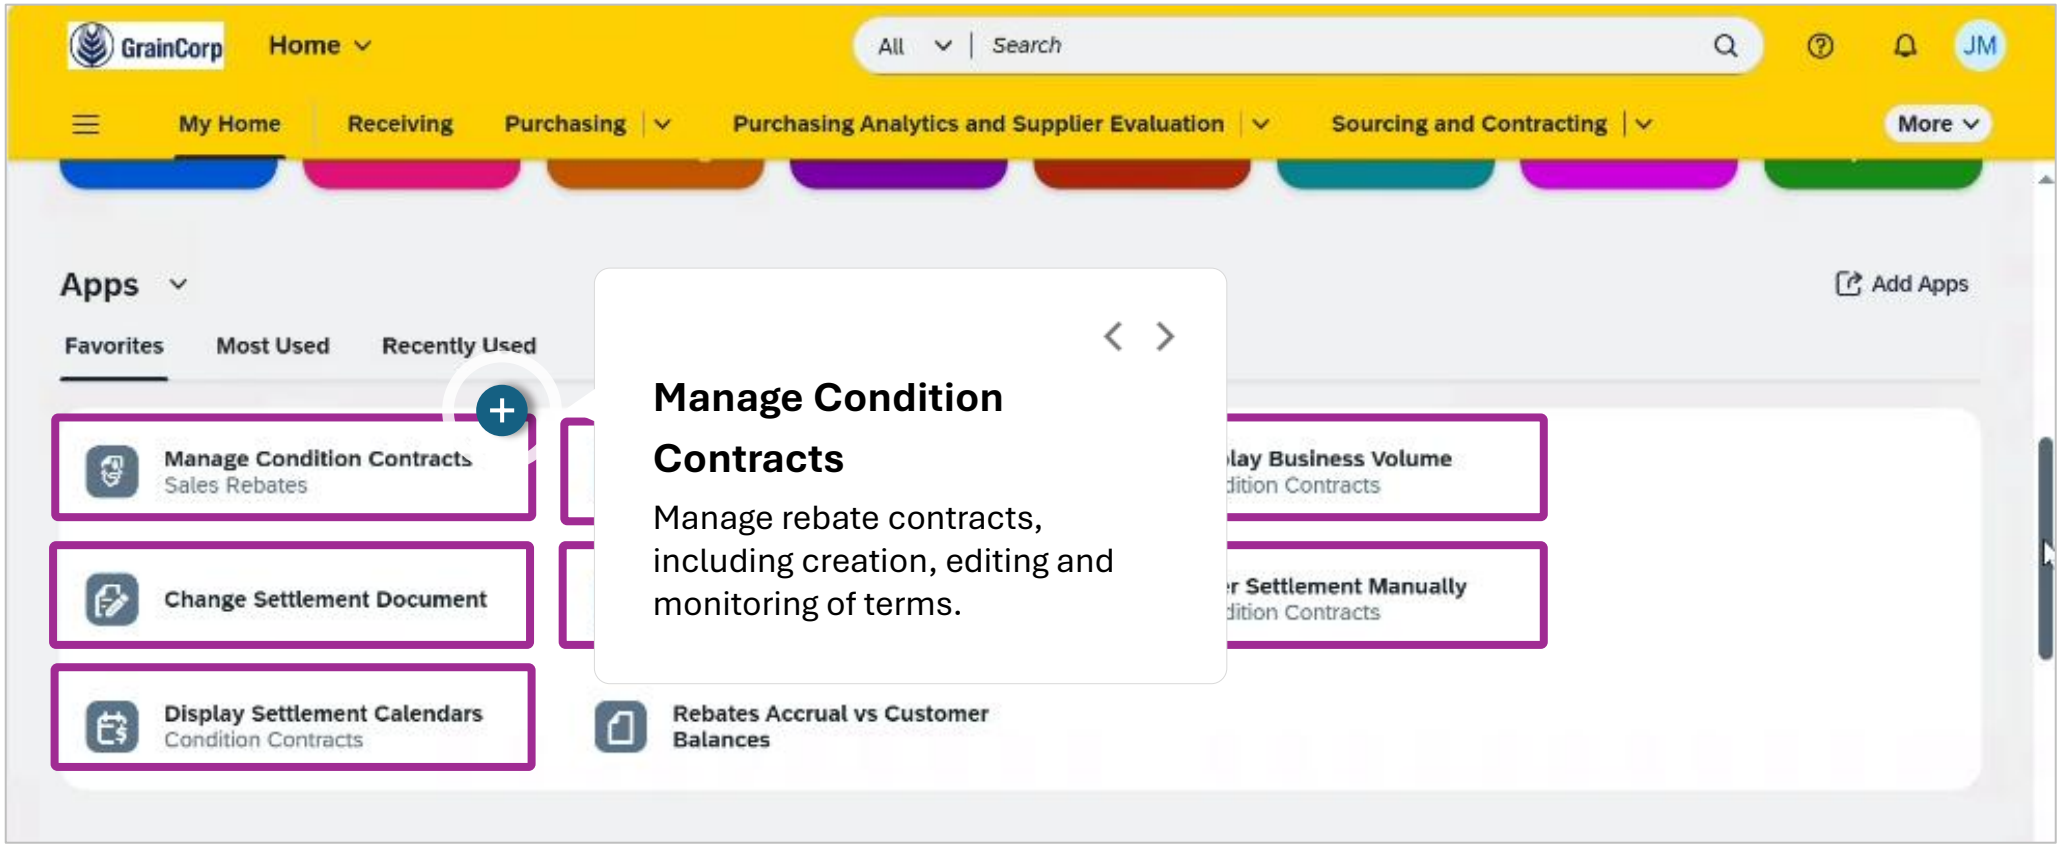

Sales Rebate Processing involves managing the **settlement of rebates** agreed upon with customers. This includes handling key elements such as **rebate agreements** (condition contracts) and **reporting business volume**. It also covers posting accruals, scheduling partial or final rebate payments based on a settlement calendar.

Key Fiori Apps

Fiori apps optimise the management of **Customer Sales Rebates** process. Key apps include:

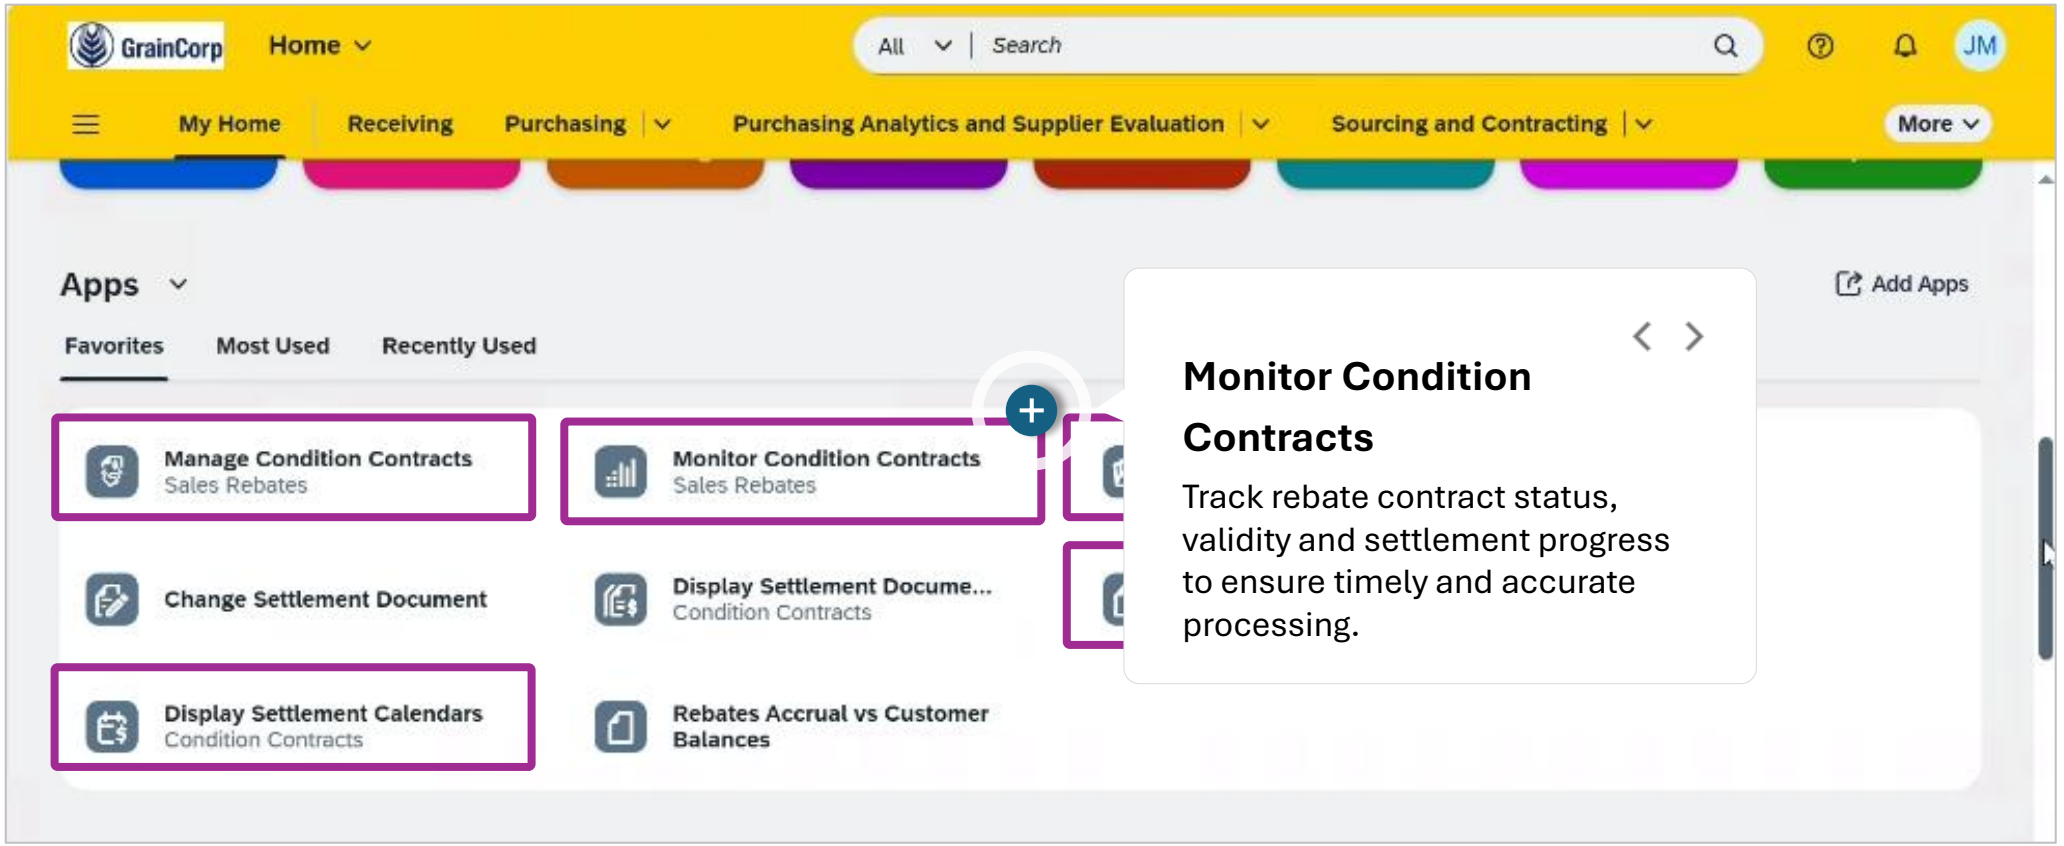

Click the + icon to learn more.

Key Fiori Apps

Click the + icon to learn more.

Sales Invoice Management

Let's understand the Sales Invoice Management process.

Template Type: Image centered

Sales Invoice Management

The Sales Invoice Management process **optimises the Order to Cash cycle** at GNE, offering automated and specialised functions for diverse billing scenarios. In S/4HANA, invoice creation is fully automated via batch jobs, eliminating the need for action from Customer Execution roles. Shared Services seamlessly takes over from there.

Sales Invoice Management

The following sub-processes support this function at GNE:

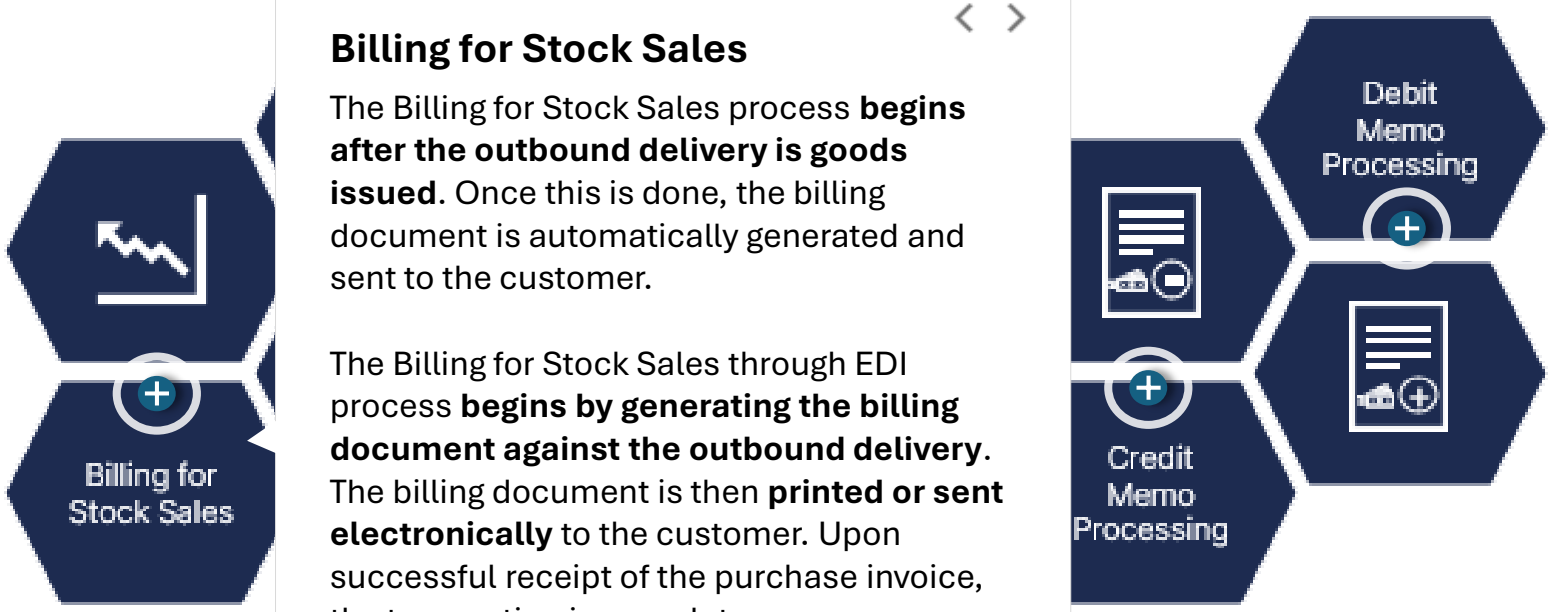

Click the + icon to learn more.

Sales Invoice Management

The following sub-processes support this function at GNE:

Click the + icon to learn more.

Billing for Stock Sales

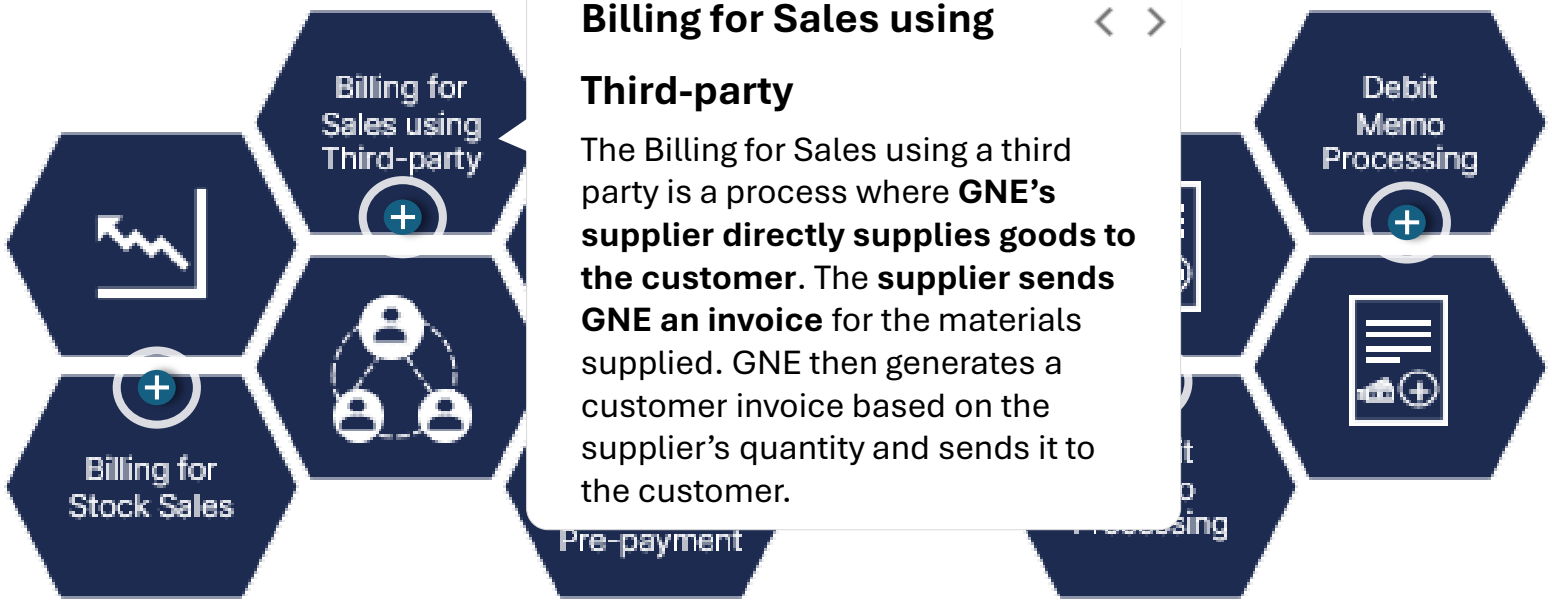

The Billing for Stock Sales process **begins after the outbound delivery is goods issued**. Once this is done, the billing document is automatically generated and sent to the customer.

The Billing for Stock Sales through EDI process **begins by generating the billing document against the outbound delivery**. The billing document is then **printed or sent electronically** to the customer. Upon successful receipt of the purchase invoice, the transaction is complete.

Sales Invoice Management

The following sub-processes support this function at GNE:

Click the + icon to learn more.

Billing for Sales using Third-party

The Billing for Sales using a third party is a process where **GNE's supplier directly supplies goods to the customer**. The **supplier sends GNE an invoice** for the materials supplied. GNE then generates a customer invoice based on the supplier's quantity and sends it to the customer.

Sales Invoice Management

The following sub-processes support this function at GNE:

Click the + icon to learn more.

Billing for Sales with Customer Pre-Payment

The Billing for Sales with Customer Pre-Payment process is used when **customers are required to pay in advance before the delivery of goods**. It involves creating pre-payment requests, recording the receipt of the pre-payment and generating a final invoice after deducting the pre-payment.

Sales Invoice Management

The following sub-processes support this function at GNE:

Click the + icon to learn more.

Billing for Sale of Services

The Billing for Sale of Services process enables **the sale of services without delivery or direct billing** related to the order. At GNE, service orders are used to charge ad hoc fees, such as urgent delivery fees or vessel nomination fees, which are not included in the pricing components of the actual sale item.

Sales Invoice Management

The following sub-processes support this function at GNE:

Click the + icon to learn more.

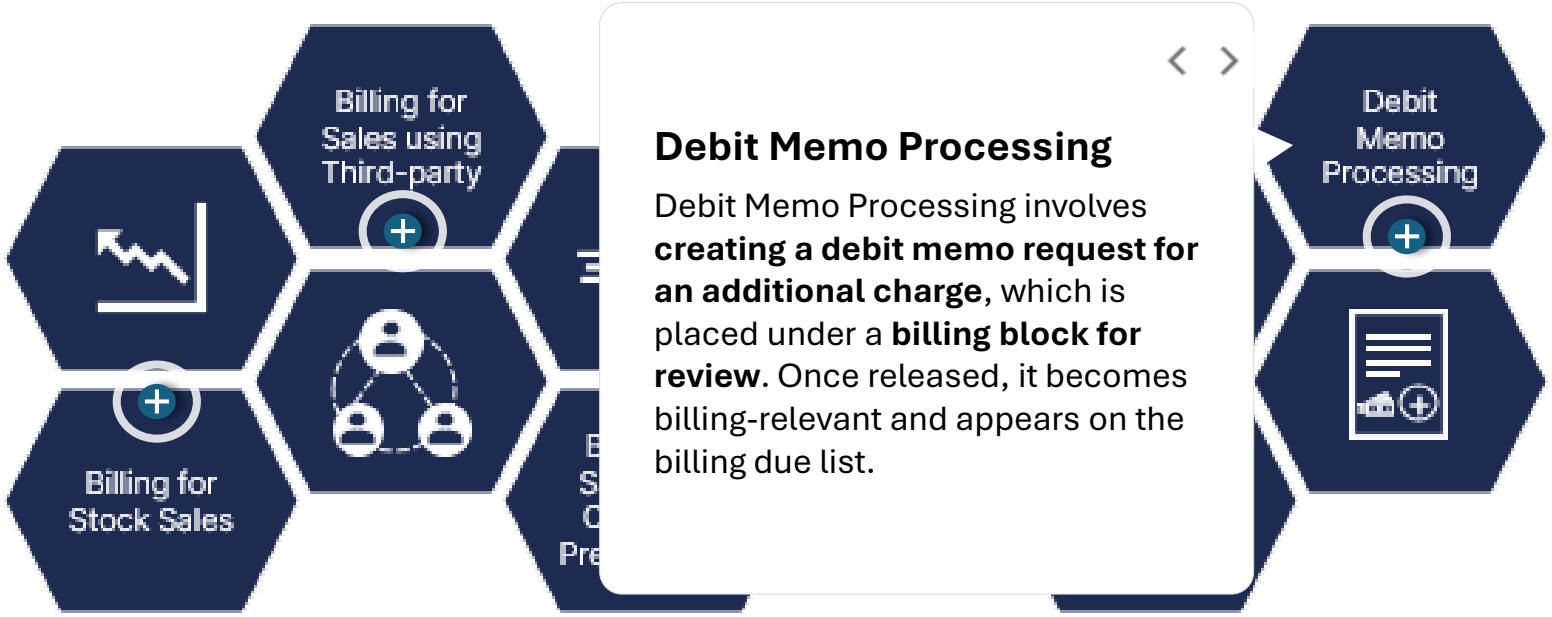

Credit Memo Processing

Credit Memo Processing involves **creating a credit memo request as a sales document to address customer complaints and request a credit**. The memo is initially placed on a billing block for review and then released for billing and added to the billing due list.

Sales Invoice Management

The following sub-processes support this function at GNE:

Click the + icon to learn more.

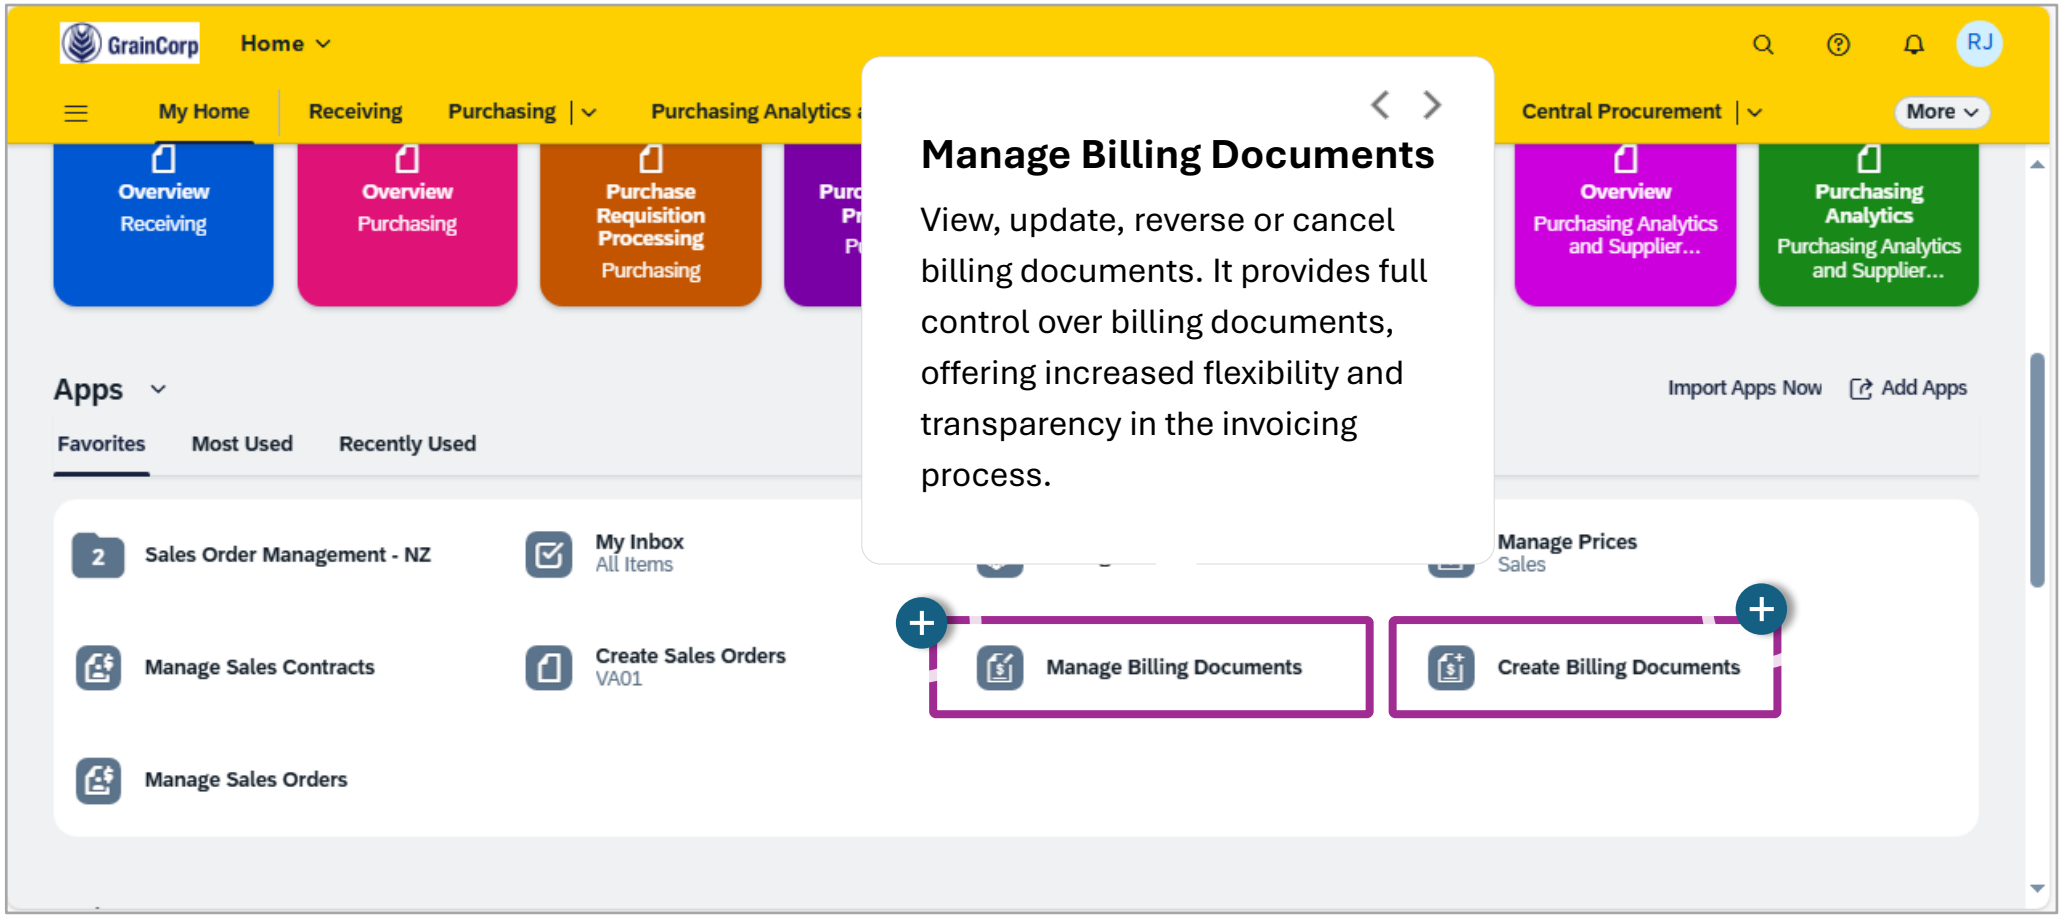

Debit Memo Processing

Debit Memo Processing involves **creating a debit memo request for an additional charge**, which is placed under a **billing block for review**. Once released, it becomes billing-relevant and appears on the billing due list.

Key Fiori Apps

Fiori apps enhance the **Sales Invoice Management** process by streamlining the billing cycle and ensuring accurate invoice creation, management and tracking. Key apps include:

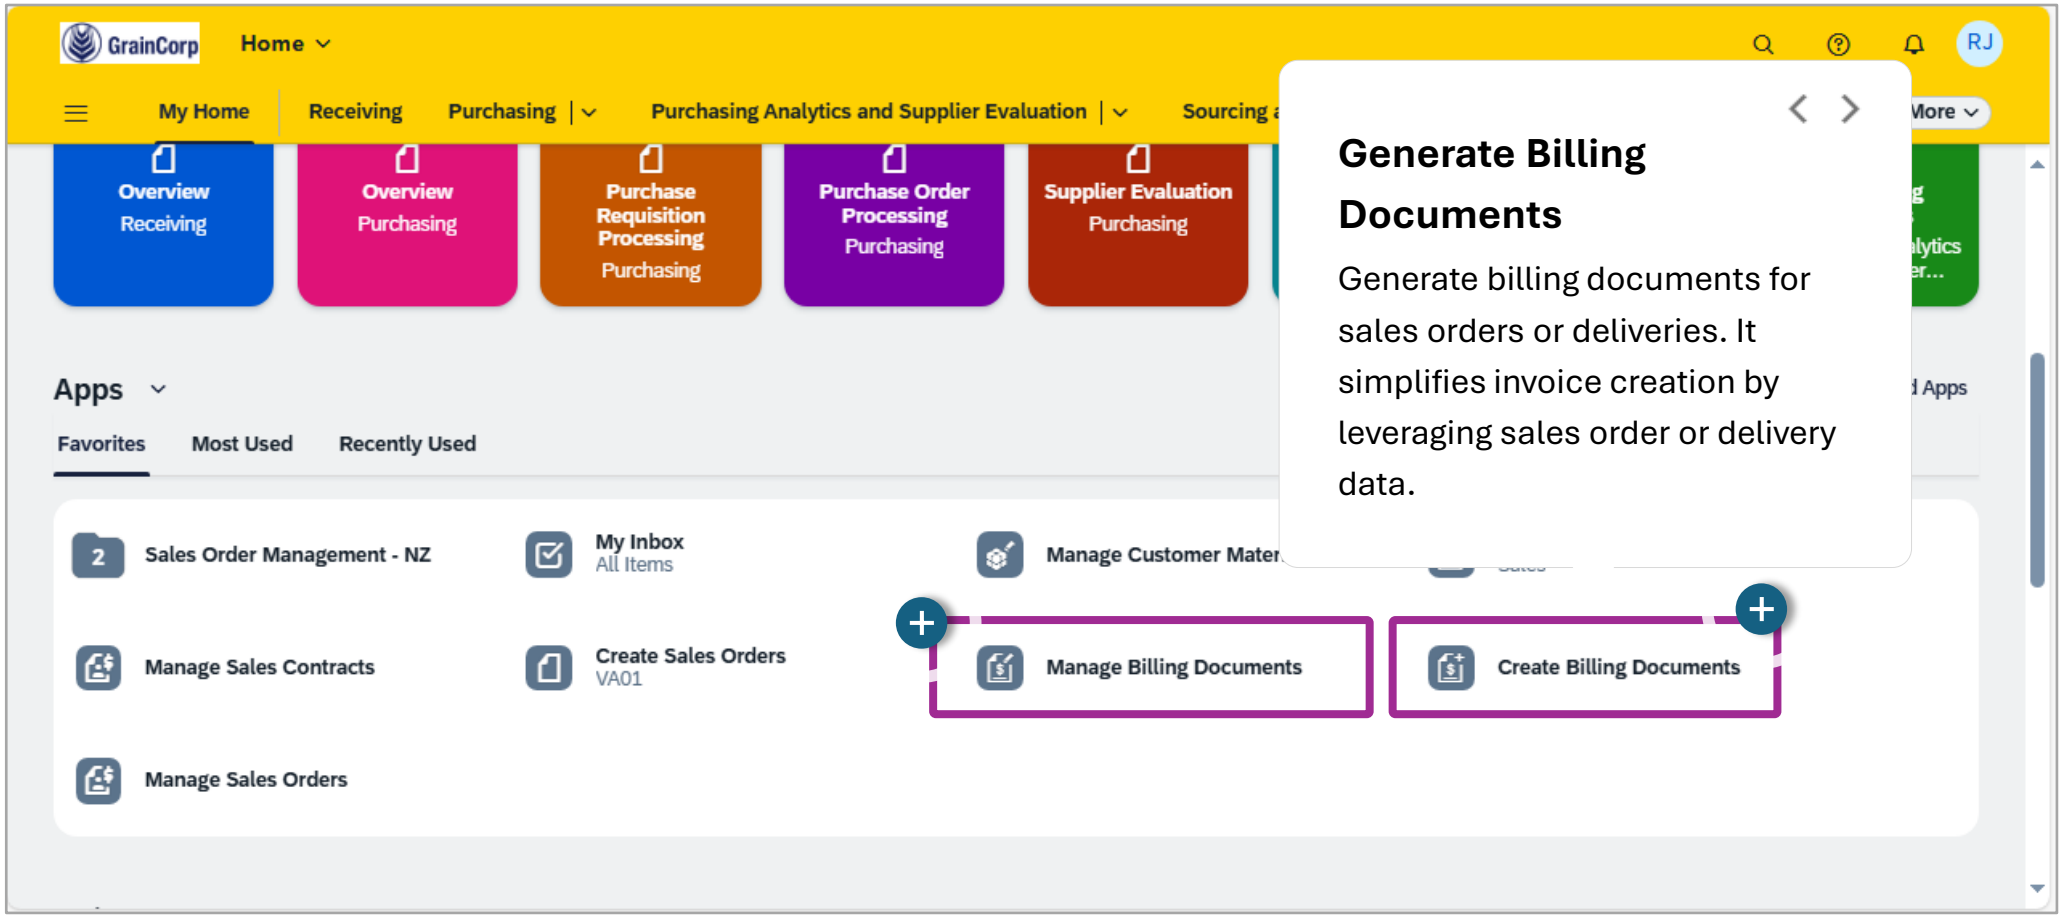

Click the + icon to learn more.

Customer Return

Let's now learn about the Customer Return process.

Customer Return

Customer Return is a process where **goods are returned from the customer to a GNE location**. A customer can return a product that is purchased through a **standard sales process** or a **third-party order process**. All returns are handled in the same way.

Template Type: Process

The Lean Customer Returns sub-process supports the Customer Return function at GNE. Let's learn more about it.

Click the START button to continue.

START

Template Type: Process

1

The **Internal Sales Representative** initiates a Return Order, referencing the original Sales Order or Invoice. A **billing block** is placed on the return order, triggering an approval workflow.

Click the arrows on the sides of the screen (<>) to learn more.

2

The return request is reviewed against predefined criteria (e.g., return reason, customer history, product condition) and routed for approval. If **approved**, the process proceeds and the billing block on the return order is lifted. If **rejected**, the customer is notified with a resolution.

Click the arrows on the sides of the screen (<>) to learn more.

3

Once approved, the Return Delivery is processed, ensuring that the return quantity, delivery address and shipping method are accurately recorded for logistics.

Click the arrows on the sides of the screen (<>) to learn more.

Template Type: Process

4

The Goods Receipt (GR) is posted against the Return Delivery, confirming that returned goods have been physically received, inspected and recorded in inventory.

Click the arrows on the sides of the screen (<>) to learn more.

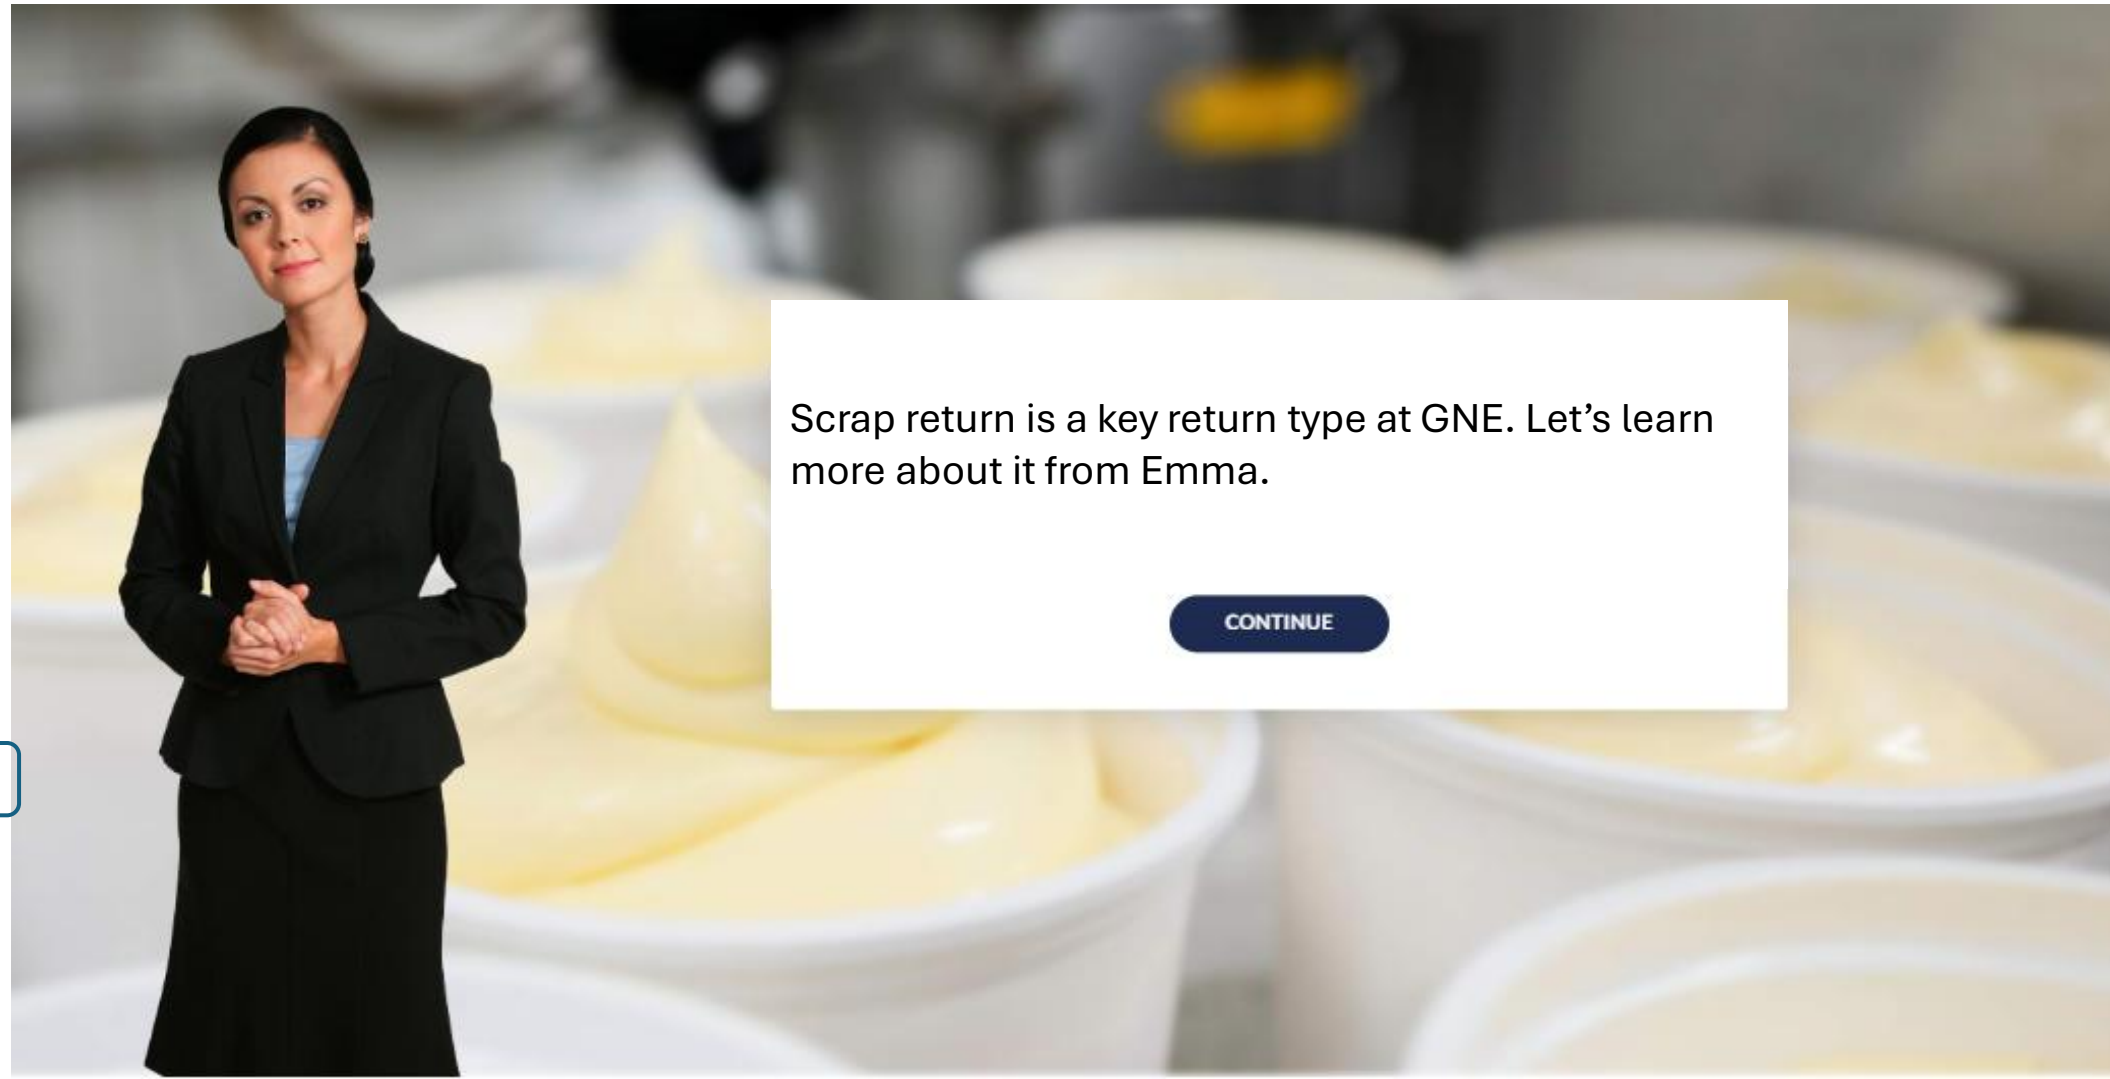

5

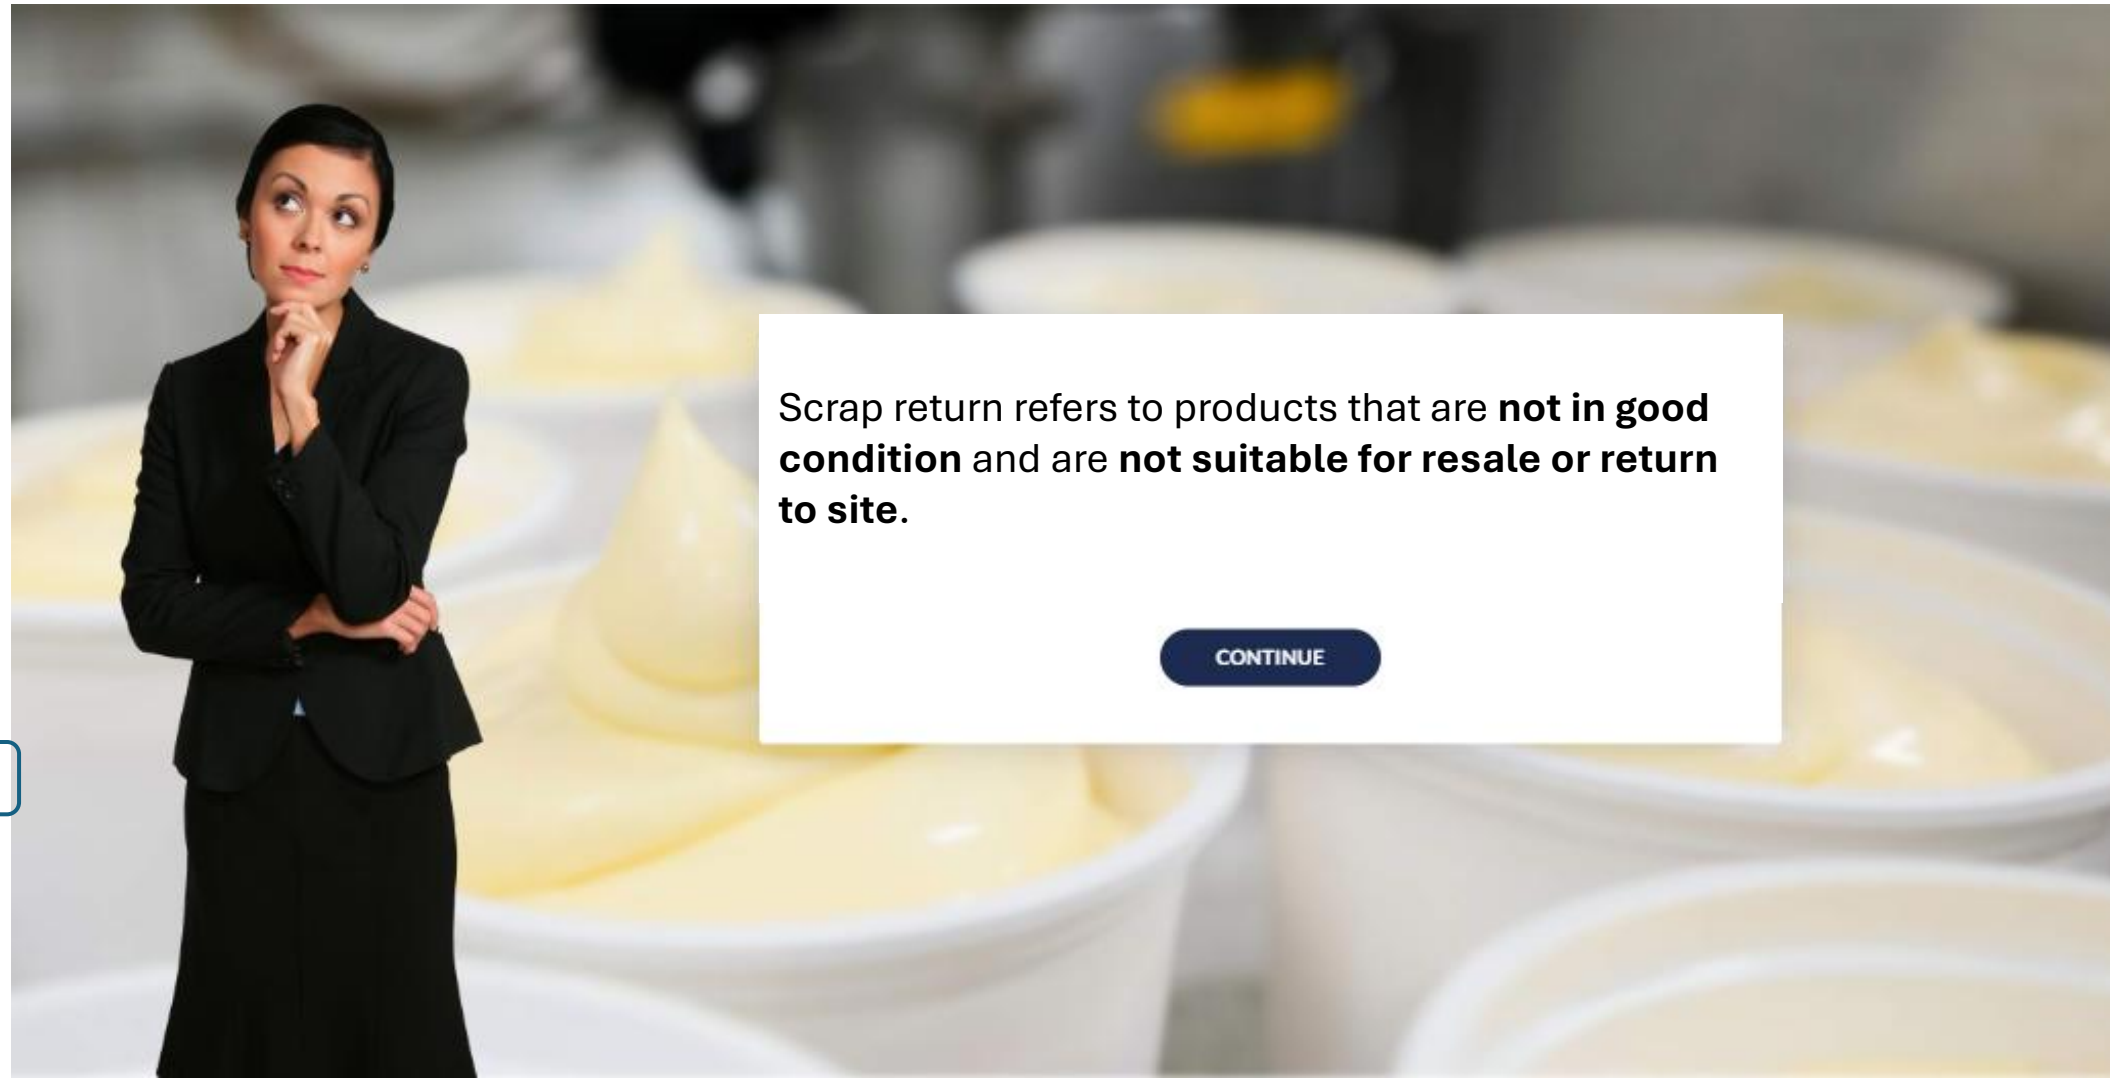

After the **GR is posted**, a **credit memo** is issued to complete the financial reconciliation. The process may be automated via a **batch job** for efficiency.

Click the arrows on the sides of the screen (<>) to learn more.

Summary

Let’s now recap what we have learnt in this course.

Template Type: Numbered List

Customer Execution at GNE involves selling of goods and services, their delivery and invoicing customers, all integrated with modules such as Transportation Management, Inventory Management, Manufacturing, Sourcing & Procurement and Finance.

Leveraging S/4HANA optimises the Order to Cash process by enabling real-time data processing, enhancing decision-making and reducing delays.

Key Customer Execution processes include Sales Master Data, Sales Contract Management, Sales Order Management, Customer Sales Rebate, Sales Invoice Management and Customer Return.

Sales Contract Management and Sales Order Management encompass the various types of sales and contracts at GNE, ensuring that all customer transactions are accurately documented, tracked and executed.

Congratulations!
